

RLGB-MS-110, Mechanical Staging Dual Fuel Burner

Specifications

- Mechanical Staging burner with capacity of 350-1100 kW on gas side (35-110 Nm³/h for G20), and turn down ratio of 1:3, and NOx class II.
- Two stage burner with capacity of 350-1100 kW on light oil side (30-93 kg/h), and turn down ratio of 1:3, and NOx class II.
- Compatible with all types of combustion chambers according to EN-303 or BS-EN 12953 standards.
- Suitable for fire tube, fire box, water tube boilers, etc.
- The burner includes: mechanical components, flame tube, air fan, light oil delivery system, control panel, ignition devices, valves and all necessary safety devices in the gaseous and light oil fuel lines.
- Burner controller: SIEMENS LFL or SHOKOUH/HONEYWELL TMG depends the policy of manufacturer based on the market availability or on the customer's order.
The controller includes: main controller, flame detector, actuator.
- The gas train includes: filter, regulator, main and safety valve, pressure gauges, maximum and minimum pressure switch (All according to BS-EN 676).
The recommended gas trains are offered in two types:
 - Rp1 ½ multi-block low-pressure gas train (inlet pressure of 44-360 mbar).
 - Rp2 separate low-pressure gas train (inlet pressure of 38-360 bar).
 - If higher pressures are available, lower gas train sizes can be offered for better prices.
- Light oil delivery system includes: separate motor for oil pump, pump with pressure regulating valve, double main solenoid valve and one safety solenoid valve in feeding line, pressure gauge in feeding line, two nozzles for two stage operation (All according to BS-EN 267).
- Advantages: optimal design, high modulating ratio, independent oil motor and air motor, silent operation, the ability to open from the hinge to both sides and ease of installation and maintenance.
- Optional ability: LPG fuel compatibility with LPG nozzle kits.
